

Secure Resilient Networks

SDSL Services

A permanent connection to the Internet

If your business has high data or bandwidth requirements CI-Net's SDSL services give you upload speeds that are up to 8 times faster than standard ADSL services. SDSL is ideal for those companies wanting fast file transfer, video streaming, video conferencing as well as hosting email or web servers.

Security

CI-Net offer both wired and wireless router options which can be pre-configured for you or left so you can set it up as you want. Businesses are becoming increasingly concerned about the risk of damage to their systems from external attack. Since all CI-Net routers come with firewall capability as standard you can be sure your valuable resources will be safe.

Resiliency

All of our broadband packages come with a back-up service which can be used to gain access to the Internet in the event of a temporary failure. If you choose to have ISDN back-up you have the option of automatic switch-over to ensure you have an uninterrupted Internet connection.

Flexibility

CI-Net offer a wide range of broadband services tailored to suit individual company needs. Whether you want 'plug in and go' hardware,

the option to configure the kit to suit your needs, or assistance with installations through our national network of qualified engineers - you decide.

Each package gives your business a permanent connection to the Internet with the ability to surf, download and email at high speed. Combined with our commitment to providing the very best personal customer support, broadband from CI-Net, will increase productivity and improve communications within your business.

Managed services

Take the headache out of providing broadband for your home workers by letting us manage the entire project for you. We look after everything from checking availability, recommending products, pre-configuring hardware and delivering kit direct to your staff.
