

CI-Net

The preferred network solutions partner

CI-Net provides wide area networks, IP services and managed infrastructures to businesses of all shapes and sizes across the UK. Our ability to rapidly deploy products and services that are secure, resilient, and flexible means our customers recognise CI-Net as a leader in the implementation of innovative solutions which are both appropriate for their needs and good value for money.

The expertise you need

CI-Net brings together people, innovative technologies and products to offer its customers a broader, more flexible approach to WAN development, which is supported by a dedicated professional services team. The quality of our people, their depth of knowledge and their ability to find the best of breed technologies are not only key to the success of CI-Net, but also the reasons why customers return to us time and time again and recommend CI-Net to others.

Our commitment to you

Our aim is to design, deploy and manage innovative solutions for IT infrastructure that are appropriate for the needs of our customers. To do this CI-Net will behave differently to ISPs and other companies in this sector and will seek to:

- Deliver the best possible technology solutions.
- Behave as if we are members of your IT team.
- Constantly improve our services based on customer feedback.
- Keep you informed throughout the project lifecycle.
- Focus on continuity of service.

The peace of mind you need

CI-Net has been focussed on the provision of IP services to the business community since 1996. Over time we have listened to the changing needs of our customers and consequently the business has evolved into one that provides fully managed wide area networks and a host of other products and services to meet the needs of our customers today.

Our flexible approach

Internet solutions don't always neatly fit into a 'one size fits all' approach. Success often depends on high levels of personal customer support and a degree of flexibility. CI-Net has its own core network which means it has the ability to host customer specific equipment inside its infrastructure. Combined with strong relationships with the most reliable carriers, this means the best quality services can be tailored to meet customers' budgets and requirements.

CI-Net is constantly changing and evolving to ensure it has the expertise and products that will help your business to run smoothly. CI-Net blends in with your organisation, soaks up your requirements and ensures that the solutions it provides are secure, reliable and flexible.

Diverse solutions to support your needs

Clients can pick and mix from our range of products and services. Whether it's a fully managed complex WAN solution, secure connectivity for home workers or simply reliable anti-virus & anti-spam protection, CI-Net can rapidly deploy an appropriate solution to meet your needs.

Wide area networks

CI-Net specialises in the provision of WANs that are secure, resilient and flexible. By using innovative technology, backed up by a dedicated professional services team we can offer design, implementation, on going support and fully managed services.

Private IP address

WANs can be designed and installed so that the circuits terminate at a CI-Net location with a private IP addressing scheme. This keeps your WAN completely separate from the Internet while utilising standard services such as DSL, E1s, Ethernet circuits and RedKite.

Hosted content filtering

Internet access is a vital component of your WAN. CI-Net can provide a hosted gateway with content filtering specifically tailored to your policies. This gives you total control without the high expense of large circuits and high traffic within your WAN.

Managed network services

As businesses rely more and more on secure communication with remote workers, clients and suppliers their WAN becomes increasingly crucial. Our managed network services are cost effective alternatives to recruiting and retaining the rare and expensive expertise needed to run your WAN.

Secure remote access

One of the most important requirements for almost all of our customers is the ability for their employees to be able to safely access the corporate IT systems and data - no matter where they are. CI-Net has a variety of tools to enable your mobile workforce.

IPSec VPN and SSL VPN

A CI-Net IPSec VPN enables fast, economical, secure and fully meshed communications between your offices while SSL VPN is ideal for home and travelling workers in non-secure environments.

iPass Global Roaming

iPass gives your global mobile workforce a safe, simple, low-cost way to connect to your systems from non-company locations like hotels or Wi-Fi hotspots.

Security Assured

CI-Net can provide a Vasco security device to provide two factor authentication so you can be sure who is accessing your systems. By installing our strong secure firewalls and intrusion protection system based on StoneGate technology you can proactively defend your corporate network.

Internet connectivity

CI-Net provides connectivity from customer locations to our core network and then onward to the Internet or to other customer specific locations. Not only do we have the usual array of tools including DSL broadband, leased lines, Ethernet circuits, but also our own RedKite wireless technology. Our job is to insulate you from the complexity of Internet connectivity and simply deliver an invisible solution, tailored to meet your specific needs on which you can totally rely.

Resiliency

You may already have built some diversity into your wide area network via dual network providers. But these often run on the same physical routers, firewalls, fibres and exchanges. All of which become a single point of failure risk. CI-Net has innovative solutions to provide true resiliency.

Wired and wireless

RedKite wireless technology allows us to supply connectivity to two different access points on your premises from two different exchanges via two different access technologies: one a traditional fibre connection, the other a high-speed wireless link. These connections are used in an Active-Active configuration to minimise risk and use all the bandwidth available to optimise performance – making the most of your investment.

Internet services

Register a domain name with CI-Net and we will fully manage your domain names, so you never need to worry about missing a renewal.

Anti-virus & anti-spam protection services from CI-Net minimise risk, combat time wasting junk mail and increase productivity.

Our full range of email services come with Webmail support so users can connect to their business e-mail through an Internet browser from anywhere in the world.
