

Secure Resilient Networks

# iPass Global Roaming

Get connected on the move around the globe

Today's workforce is increasingly mobile. iPass gives these mobile workers a safe, simple way to connect to your enterprise resources from almost anywhere in the world from non-company locations such as hotels, Wi-Fi hotspots or local in country dial services.

## Flexibility

iPass has the world's largest virtual network including access points in over 160 countries and integrates more than 300 provider networks into a single service covering over 100,000 access points today, including:

- Over 100,000 Wi-Fi hotspot and Ethernet hotel broadband locations in over 70 countries
- 433 airports, including 83 of the top 100 busiest by passenger volume, and more than 22,000 hotels and conference venues around the world.
- Thousands of dial access points in more than 150 countries including multiple redundant network providers in thousands of cities to protect against single-provider outages.
- Mobile broadband, with additional providers being added around the world. Mobile broadband providers that are not part of the iPass network can also be accessed through the iPassConnect client which includes integration of dozens of mobile broadband PC card adapters.

## Security control

Maintain control over how users connect while leveraging your existing security investments. Now your mobile workers can have safe, simple and reliable access to network resources from virtually anywhere with the iPass Mobile Office service. The iPass core mobile connectivity service lets users enjoy a simple, always-familiar connection experience in major cities and business centres around the world. It also spans diverse access technologies, including dial, Wi-Fi hotspots and wired broadband. Equally important, IT managers gain centralised policy-based management and end-to-end security enforcement.

## Value for Money

Management Portal. iPass simplifies the billing process by providing a single bill that covers all usage, regardless of the network provider used. The iPass portal is your single source for online billing, service administration, usage reporting, support services and more.
